# Contents

# 1   Introduction

How do we teach machines morals and why is this something we would want or avoid?

# 2   Analysis

*Read articles.*

# 3   Conclusion

Moral machines would benefit us but are difficult to make because not everyone has the same morals.

# 4   Discussion

Morals change over time and are always debated and disagreed on by various people/cultures. If we wanted to make a moral machine we would have to make it able to dynamically learn new morals depending on where this machine would be used.
